

AUTHORIZE.NET FOR SUGAR®

SugarCRM is one of the fastest growing CRM software package in the world.

Authorize.Net is one of the leading credit card processors in the world. If you are looking to process credit cards through your SugarCRM, integrating with Authorize.Net would streamline the process and eliminate loads of manual and duplicate processes. This helps streamline operations, reduce errors, and reduce manpower required for the processing of transactions.

Authorize.Net enables merchants to authorize, settle and manage credit card and electronic check transactions via Web sites, retail stores, mail order/telephone order (MOTO) call centers and mobile devices. The Authorize.Net platform manages the routing of transactions just like

a traditional credit card swipe machine you find in the physical retail world. However, Authorize.Net uses the Internet instead of a phone line. The Authorize.Net Payment Gateway is available 24/7 for processing credit card transactions.

NEW FEATURES

SugarCRM – Authorize.Net Integration Enterprise Edition Now Available. Features include:

- Recurring billing.
- Sync ALL outside transactions to Sugar.
- New cancel subscription button on record view for easier cancellations.
- Includes all new features from the Professional version.
- Sync outside transactions to Sugar (does not include transactions made via a subscription).
- Create a new customer profile from an orphaned transaction (like a transaction made from a credit card swipe or from a mobile device).
- Now sync and update unsettled to settled transactions.
